WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

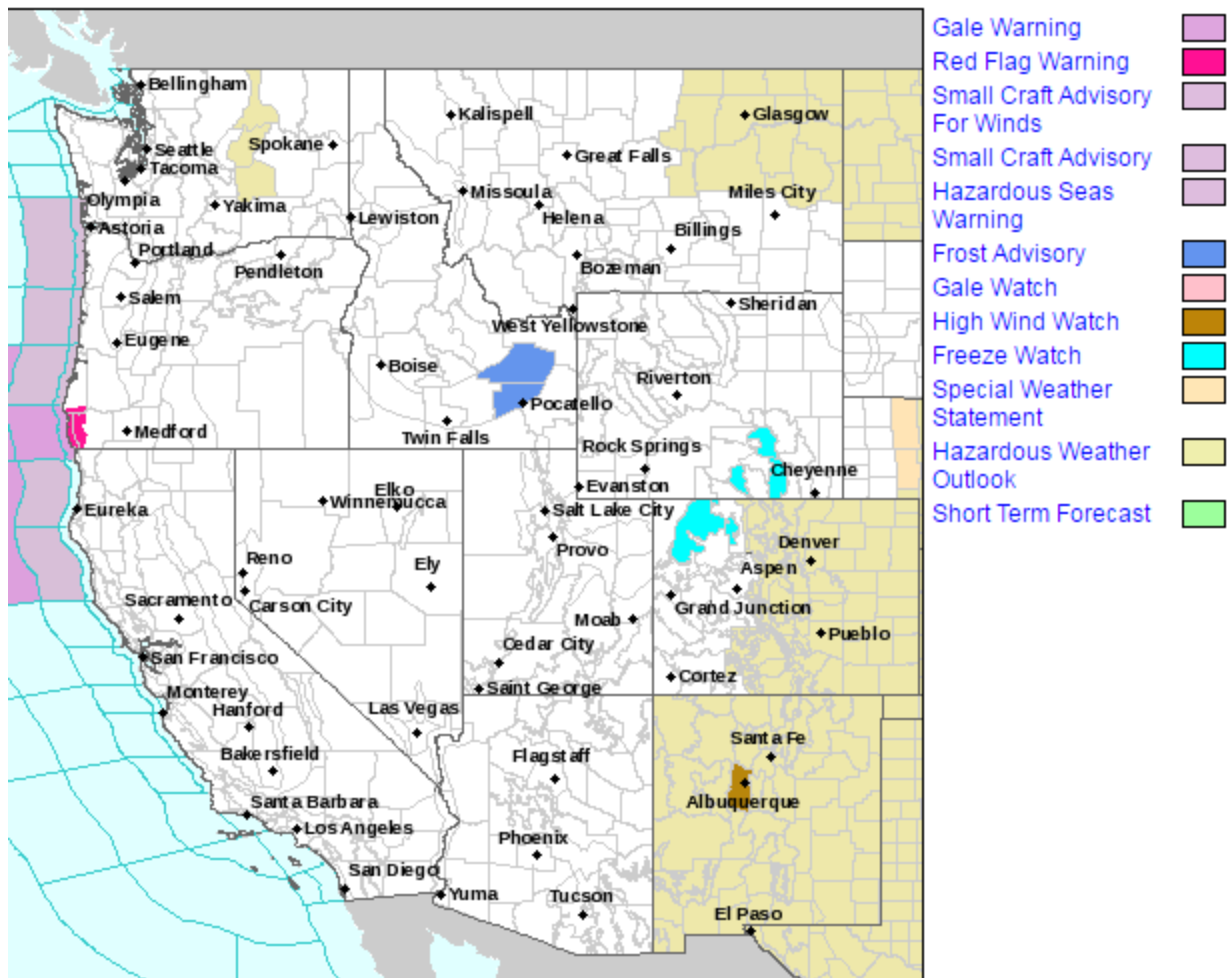

Not a lot of change is expected in the overall weather through Saturday as conditions stay dry and unseasonably warm with a rather thin marine layer too. The warmest inland areas will be near 100 today and Saturday. Rather poor to moderate overnight relative humidity (RH) recovery (25-45%) and low afternoon RH (8-15%) will continue. Later Saturday the pattern will begin to change, and a low pressure trough will drop south through the Pacific Northwest Sunday. A low will cut off from the trough and linger over the region early next week. This will lead to a chance of isolated showers and late season thunderstorms near and east of the Cascade/Sierra crest Monday and Tuesday, and perhaps further west Tuesday as well depending on where the low actually takes up residence. Dry easterly winds are also expected for the areas west of the crest Monday and Tuesday with gusts of 20-30 mph possible. Temperatures will cool off Sunday, then be much cooler Monday through Wednesday when the warmest inland areas will be in the 80s. Tuesday appears likely to be the coolest day. The low will slowly move east into the Great Basin the latter half of next week and high pressure will take over the our weather pattern again, likely with dry, gusty north to northeast winds returning late next week.

SOUTHERN CALIFORNIA

A weak area of low pressure currently off the Southern California Coast will bring near normal temperatures through this weekend, with upper 70s and 80s across the mountains and upper 80s and 90s in the valleys. Minimum humidity will be mainly between 12% and 25% above and inland from the marine layer through this weekend. The marine layer will be around 1,500 feet deep across Central California and around 2,500 feet deep across Southern California. Isolated afternoon showers and thunderstorms will occur over the Central and Eastern Sierra Sunday as the weak low moves inland. Winds will remain light across the region through this weekend. A stronger area of low pressure will form over Northern California Monday and bring strong south to west winds to the mountains and deserts through Tuesday evening. This low will also bring isolated showers and thunderstorms to the Central and Eastern Sierra Tuesday. The marine layer will become deep, with morning low clouds and fog moving over the lower coastal mountain slopes Tuesday. Temperatures will become 5 to 15 degrees below normal across the region early next week. The low will move off to the east by next Wednesday bringing a warming trend to the region through the end of next week.
